

# Self Eval

Tristan Bowler

## 1. What was the hardest part of the assignment for you?

Like the other two assignments getting started was the most difficult part. I spent a great deal of time reading files and figuring out what return types and certain objects were. For example it took me a surprisingly long time to find argMax and figure out its usefulness with the Counter object.

## 2. What was the easiest part of the assignment for you?

Question 5 had a delightful amount of instruction. If only all questions were like that. And the ApproximateQ was easy after the first part got done.

## 3. What problem(s) helped further your understanding of the course material?

I think part 6 helped me see the random choosing at work the best.

## 4. Did you feel any problems were tedious and not helpful to your understanding of the material?

This assignment kinda felt like I was brute forcing my way through until the light bulbs came on. It was perhaps just the mind state I was in but the code wasn't making the concepts click as well for me as they did on the second assignment.

## 5. What other feedback do you have about this homework?

Thanks for the extra time, and the extension!
